                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a protein array comprising a surface upon which at least two protein moieties are deposited at spatially defined concations, where the protein moieties are naturally occurring variants of concations, where the protein moieties are naturally occurring variants of concations, where the protein moieties for molecules that interact with one or more proteins; and (3) simultaneously determining the relative properties of members of a set of protein moieties. The protein array can be used for determining the phenotype of a naturally occurring variant of a DNA sequence of interest. The protein array is useful for drug cdiscovery, pharmacogenomics and diagnostics. The protein array allows the parallel analysis of closely related proteins with a sensitivity that is at least comparable to existing methods, if not better, with small comparative functional analysis manner not previously possible. The method of the invention may be useful for testing the possibility of a side effect resulting from a drug metabolised by CYP3A4 in a subject. The current sequence is that of the human wild-type cytochrome P450 CYP3A4 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 503 AA;

CC having spatially defined locations where at each location there are complex at least two protein moieties capable of forming a complex. CC where the complex is transiently formed and where the protein moieties CC act sequentially on a substrate of interest and are derived from one or more drug metabolising enzymes (DMEs). Also described: (1) a method of CC making a protein array, (2) an array made by the method of (1); (3) a CC method of screening a set of protein moieties for molecules which CC interact with one or more proteins; (4) a method of simultaneously CC determining the relative properties of members of a set of protein CC moieties; and (5) a method of expressing and purifying a DME. The protein CC array is useful in examining gender differences in drug metabolism, CC ethnicity-related differences in drug metabolism and toxicity between two creatabolites, in defining and quantifying metabolic pathways for small CC molecules, in screening of compounds that binds and inhibits individual CC DMEs and in analysing induction of p450 expression by one or more CC compounds of interest and the effects of mutation on the activity of a CC DME of interest and the effects of mutation on the activity of a compounds of interest and the effects of mutation of the present CC invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New protein array comprising a surface having spatially defined locations containing drug metabolizing enzymes, examining gender and ethnicity-related differences in drug metabolism or cytotoxicity of drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N-PSDB;

XX

The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polynucleotide, a host cell CC comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates to the expression of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating compound that regulates the cc polynucleotides, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of the polypeptides or their antibodies. The polynucleotide or the compound that composition comprising the one or more compound that properties or their antibodies. The polynucleotide or the compound that composition comprising a medicament for treating pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene compound that properties of the polynucleotide or the compound that the properties of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                    The amino acid sequence of the human cytochrome P450 species 3A4. The CDNA was amplified by PCR using the primers AAQ87743-6. The product was cloned into the yeast expression vectors pAAH50 or pAHRR to produce the vectors p3A4 for the expression of the cytochrome P450 alone or p3A4R for co-expression with the yeast NADH-P450 reductase. The vectors are used in a method for evaluating the safety of a chemical compound by reacting the chemical compound with recombinantly produced human cytochrome P450 molecular species 1A2 (AAQ87714), 2C9 (AAQ87715), 2E1 (AAQ87716), or 3A4, or their auxillary species and variants (AAQ87718-32), and yeast NADPH-P450 reductase, either as a fused protein or in cell extracts, and analysing the resulting metabolite to assess the safety of the chemical compound, or its metabolite, will be converted into a carcinogenic or mutagenic form through metabolism in the liver.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ঠ
                                                            Query Match
                                                                                                                                                                    The present sequence is the human derived cytochrome (HDC) P4503A4, which was obtd. from a commercial cDNA library. Yeast were transfected with an expression vector contg, the HDC cDNA, cultured and then disrupted to give a microsomal fraction. The HDC was purified from the fraction, and used to immunise and sensitise a mammal. Blood was drawn from the mammal, and an anti-HDC antibody isolated. The antibody obtd. recognises HDC P4503A4, partic. at a serum dilution rate of 1:10000, and is substantially without cross reaction to other HDC P450 spp

This is the amino acid sequence of the human cytochrome P450 molecular species 3A4 protein. The corresp. gene was amplified from a human liver derived cDNA library as 2 fragments of 0.6 and 0.9 kb using primers AAT26933-6. The prod. was cloned into the yeast expression vector pAAH5N to generate plasmid p3A4 for prodn. of the cytochrome only or into the vector pAHRR to generate the plasmid p3A4R for co-prodn. with the yeast NADPH-P450 reductase. The sequence is placed under control of the yeast NADPH-P450 reductase. The sequence is placed under control of the yeast NADPH gene promoter and terminator. The vectors are used in a method for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        liver; yeast; evaluation; so

The cpd. is considered "safe" if it is detoxified or not rendered carcinogenic or "unsafe" if it is not detoxified or is metabolised to a carcinogenic cp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents the human CYP3A4 gene protein. The invention crelates to a CYP3A4 sequence polymorphism, which is part of a non-carring chromosome. Nucleic acids comprising the CYP3A4 coccurring chromosome. Nucleic acids comprising the CYP3A4 cocurring chromosome. Nucleic acids comprising the CYP3A4 coccurring chromosome. So an expectation of the CYP3A4 substrates, potential drug-drug interactions, and cadverse/side effects as well as diseases that result from environmental corresponditional exposure to toxins. They can also be used to establish animal, cell culture and in vitro cell-free models for drug metabolism. Colymorphic CYP3A4 gene sequences can be used for expression studies to determine the effect of promoter and/or intron sequence variations on male expression and stability. The polymorphisms are also used as single nucleotide polymorphisms to detect genetic linkage to phenotypic variation in activity and expression of CYP3A4. The nucleic acids can also be used to generate genetically modified non-human animals or site specific gene modifications in cell lines

The composition or the polypeptide, polynucleotide or RNA precursor, or antibody is useful for diagnosing, preventing or treating diseases (e.g. cell proliferative diseases such as cancer) in an individual. These may also be used for identifying substances capable of binding to or modulating the function of the polypeptide, capable of affecting the function of the polypeptide, capable of affecting the cell division cycle or cell cycle progression, preferably mitosis and/or meiosis. The present sequence represents an antagonist of cell cycle progression protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New cell cycle progression genes and proteins for modulating progression in cells, for preventing, treating or diagnosing proliferative diseases (e.g. cancer) or for identifying modulations or meiosis.
                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 2;

                                                                                                                                                                     dynamics docking of one or more substrates on multi-specific enzymes.

Specifically, it refers to determining the three-dimensional structure of active sites that are flexible and can adapt to different substrates i.e. multispecific enzymes such as cytochrome P450. The present invention describes identifying common structural blocks (CSBs) among members of the family, aligning primary amino acid sequences, aligning the protein as compared on the first alignment to obtain a second alignment, defining 3D structure of protein CSBs, defining global constraints and selecting rotamers, in order to determine the family of 3D model protein structures and optimise models by dihedral angles. Accordingly, the method can be used for screening, designing or identifying natural, unnatural or substrate analogues, as well as inhibitors, activators or modulators of the multispecific enzyme in question. In addition, it can determine the effect of a first substrate on a second substrate, which can then be applied to pharmaceutical products. Purthermore, the method can be used to determine the exidative modification of the substrate according to its
                                   proximity to a haem molecule, for performing dynamic docking of the metabolite either in the absence or presence of a second substrate in the computed simulation and to compare the energy of the bound metabolite relative to the energy of its parent substrate bound, in order to determine if the exit of the given metabolite from the enzyme is favoured or not. This polypeptide sequence is a protein from the cytochrome P450 family of enzymes, given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Designing 3 dimensional (3D) protein model, by identifying common structural blocks (CSBs) among family members, aligning sequence, defining 3D structure of CSBs, global constraints, selecting rotamers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human cytochrome P450 CYP3A4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ADO47239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ADO47239 standard; protein;

CC dynamics docking of one or more substrates on multi-specific enzymes.
CC Specifically, it refers to determining the three-dimensional structure of continue site of the tare flexible and can adapt to different substrates i.e. compared on the first alignment to obtain a second alignment, defining common structural blocks (CSBs) among members of the family, aligning primary amino acid sequences, aligning the protein CC as compared on the first alignment to obtain a second alignment, defining continues, in order to determine the family of 3D model protein structures and optimise models by dihedral angles. Accordingly, the method can be used for screening, designing or identifying natural, unnatural or cubstrate analogues, as well as inhibitors, activators or modulators of the multispecific enzyme in question. In addition, it can determine the continues of the determine the oxidative modification of the substrate according to its parlied to pharmaceutical products. Furthermore, the method can be used to determine the oxidative modification of the substrate according to its provinity to a haem molecule, for performing dynamic docking of the computed simulation and to compare the energy of the bound metabolite computed simulation and to compare the energy of the bound metabolite computed simulation and to compare the energy of the bound metabolite continues if the exit of the given metabolite from the cytochrome p450 can be used to family of enzymes, given in an exemplification of the invention.

A34101
cytochrome P450 3A5 - human
cytochrome P450 3A5 - human
N;Alternate names: cytochrome P450 HLp2
N;Contains: oxidoreductase (EC 1....)
C;Species: Homo sapiens (man)
C;Date: 10-Sep-1999 #sequence revision 10-Sep-1999 #text_change 09-Jul-2004
C;Accession: A34101; S06491; T52302
R;Aoyama, T.; Yamano, S.; Waxman, D.J.; Lapenson, D.P.; Meyer, U.A.; Fischer, V.; Tyn
J. Biol. Chem. 264, 10388-10395, 1989
A;Title: Cytochrome P-450 hPCN3, a novel cytochrome P-450 IIIA gene product that is c
DNA-expressed hPCN1 and hPCN3 for the metabolism of steroid hormones and cyclosporin
DNA-expressed hPCN1 and hPCN3 for the metabolism of steroid hormones and cyclosporin
Nacference number: A34101; MUID:89278095; PMID:2732228
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A; Molecule type: pro

A;Title: Regulation of the rabbit cytochrome P-450 3c gene. Age.
A;Reference number: A34236; MUID:89380226; PMID:2777787
A;Accession: A34236
A;Molecule type: mRNA
A;Residues: 1-501 <POT>
A;Gene: CYP3A6
C;Superfamily: human cytochrome P450 CYP3A5; cytochrome P450 hor C;Keywords: chromoprotein; electron transfer; heme; iron; metall F;300-467/Domain: cytochrome P450 homology <P45>
F;440/Binding site: heme iron (Cys) (axial ligand) #status predi

cytochrome P450 3A isoform, CYP3A43 protein - human
C;Species: Homo saptens (man)
C;Species: Homo saptens (man)
C;Accession: JC7627
C;Accession: JC7627
R;Westlind, A.; Malmebo, S.; Johansson, I.; Otter, C.; Andersson, T.B.; Ingelman-Sundber
Biochem. Biophys. Res. Commun. 281, 1349-1355, 2001
A;Title: Cloning and tissue distribution of a novel human cytochrome P450 of the CYP3A s
A;Reference number: JC7627; MUID:21139777; PMID:11243885
A;Accession: JC7627
A;Molecule type: mRNA
A;Residues: 1-503 <WES>
A;Cross-references: UNIPROT:Q9HB55; GB:AF337813
C;Gemetrics: This CYP3A43 protein has broad and overlapping substrate specificities, and a
C;Genetics: CYP3A43
A;Trrong-72/7: 55/3. 71/2. 106/3. 144/3. 174/2. 224/1. 266/3. 280/1. 342/3. 418/2. 473

Cytochrome P450 3A6 (version 1) - rabbit

N;Alternate names: cytochrome P450 3c

N;Contains: oxidoreductase (EC 1.-.-)

C;Species: Oryctolagus cuniculus (domestic rabbit)

C;Date: 31-Dec-1988 #sequence_revision 31-Dec-1988 #text_change 09-00;C;Date: 31-Dec-1988 #sequence_revision 31-Dec-1988 #text_change 09-00;C;Accession: A29487

R;Dalet, C.; Clair, P.; Daujat, M.; Fort, P.; Blanchard, J.M.; Maure DNA 7, 39-46, 1988

A;Title: Complete sequence of cytochrome P450 3c cDNA and presence ch;Reference number: A29487; MUID:88166352; PMID:3349903

A;Accession: A29487
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A;Cross-references: UNIPROT:P11707; GEORGES:
